

# PeopleSoft Support for PeopleTools on Tru64 UNIX®

Tru64 UNIX® customers running PeopleSoft Enterprise Applications can rest assured that their environment will remain current and supported through the current major release of PeopleTools.

PeopleSoft certifies PeopleTools, the underlying foundation architecture of all PeopleSoft Enterprise Applications, to run with HP Tru64 UNIX. The specific applications that are built to run on a particular PeopleTools version are therefore certified.

The following products are currently available on HP Tru64 UNIX V5.1B:

- Ø PeopleSoft Enterprise PeopleTools 8.20
- Ø PeopleSoft Enterprise PeopleTools 8.45

All above products have been certified to run with Tru64 UNIX 5.1B. As 5.1B will be the last functional release of Tru64 UNIX, it is advised to upgrade to this operating system version.

The following products are currently planned for HP Tru64 UNIX; new ports are expected throughout the PeopleTools 8.4x major release schedule.

- Ø PeopleSoft Enterprise PeopleTools 8.21
- Ø PeopleSoft Enterprise PeopleTools 8.46

PeopleSoft currently plans to sell PeopleSoft 8.4x through 2006 and is committed to support of applications for at least four years after the final release.

If you require assistance with sales technical issues, you may direct your inquiry to the Sales and Technical Alliance Team in your region:
